Education

Purdue University, West Lafayette, IN

Graduating Fall 2027

Bachelor of Science in Computer Science - GPA: 3.73/4.0

- **Relevant Coursework:** Data Engineering in Python, Object-Oriented Programming in Java, Programming in C, Great Issues in Computer Science, Computer Architecture, Data Structures And Algorithms, Systems Programming, Information Systems

Technical Skills

Languages: Python, Java, C/C++, SQL, JavaScript/TypeScript, R, HTML/CSS

Frameworks/Libraries: React, Flask, Node.js, Pandas, Numpy, Scikit-Learn, PyTorch, TensorFlow, LangChain

Tools: Git, AWS, Firebase, VS Code, Ubuntu, LaTeX, Microsoft Office

Projects

Veritas - AI Financial Assistant | *ReactJS, Python, PostgreSQL, AWS, Firebase*

June 2025 - August 2025

- Developed a secure full-stack budgeting application using React, Flask, Firebase Auth, and PostgreSQL, enabling users to track and analyze personal spending with a personalized dashboard including spending breakdowns, trends, and charts.
- Implemented an LLM-powered system to parse and categorize user transactions into personalized spending categories, achieving a 92% transaction categorization accuracy vs. manual labeling on test set.
- Created a conversational assistant using Retrieval-Augmented Generation (RAG) to convert user queries into executable Pandas for custom finance Q&A

NYC Subway Tracker | *Javascript, Python*

January 2025 - February 2025

- Developed a live tracking system using the MTA API to gather real time updates on 500+ trains and static datasets (stop time, route info) by the MTA, implementing linear interpolation to estimate train positions every 3 seconds
- Optimized distance calculations with Haversine formula, reducing update time and increasing efficiency by 85%

Airport Wait Time Predictor | *Javascript, Python*

May 2025 - June 2025

- Engineered ML models (Gradient Boosting, Nueral Networks, Decision Trees) on 200k+ rows of passenger data.
- Designed holiday-based feature engineering that boosted R^2 by 10% and revealed critical patterns in peak airport congestion.
- Built a full-stack prototype application with Flask (Python backend) and JavaScript/HTML (frontend) to serve real-time predictions of airport wait times.

Experience

Incoming Technology intern

May 2026 - Aug 2026

Duke Energy, Charlotte NC

Machine Learning Researcher

Aug 2025 - Present

The Data Mine - Purdue University, West Lafayette, IN

- Collaborating with Johnson & Johnson to automate departmental budget and invoice reports by integrating financial data pipelines directly into PowerBI.
- Designing interactive dashboards in Power BI to visualize budgets, invoices, and committed spending, enabling faster financial tracking across departments.

Software Developer Intern

Dec 2023 - Feb 2024

Eaton Corporation - Pittsburgh, PA

- Developed a full-stack web application (Node.js, HTML, CSS, JavaScript) that generated customized power meter recommendations, improving client decision-making.
- Designed and implemented a centralized database of 12 power meters, consolidating technical specifications into one source.

Leadership

Resident Hall Advisor

June 2025 - August 2025

Foundation For Free Enterprise Education - Williamsport, PA

- Supervised students during meals, free time, and overnight hours as a staff representative for the PFEW program
- Responded to unexpected situations and emergencies, including accompanying students to medical facilities
- Processed keys, prepped dorms, and organized materials for smooth daily operations

Summer Camp Counselor

Jun 2024 - Aug 2024

Mt. Lebanon Parks & Recreation - Pittsburgh, PA

- Supervised and engaged campers in daily activities while fostering a safe, inclusive, and positive environment.
- Collaborated with staff to implement a 6-week program, mentoring campers to support personal growth and development.
